

SUMMARY

Locality of *Paraleucobryum sauteri* (Bryopsida) in the Babiogórski National Park

Paper presents description of new locality of moss *Paraleucobryum sauteri*. It was found in the Babia Góra massif (Western Carpathians) on bark of old *Fagus sylvatica* in beech forest *Dentario glandulosae-Fagetum* at an altitude of 1150 m. Features of this species distinguishing it from *P. longifolium* are discussed.
