

## SUMMARY

### **A new locality of *Lindernia procumbens* (Krock.) Borbás in the Milicz Basin**

In 2005 a new locality of *Lindernia procumbens* was found on the bottom of the dried up fishpond Jan in Janisławice near Sośnie in the Milicz Basin (square CE 02 of the ATPOL grid; 51°28'N/17°31'E). Small population (8 specimens) grows here in *Eleocharetum ovatae* association of *Isoëto-Nanojuncetea* class.
