

SUMMARY

Gębala M. New localities of *Epipactis albensis* Nováková et Rydlo in the Góry Opawskie Mountains (SW Poland).

Chrońmy Przyrodę Ojczyzną **64** (3): 36–42.

In 2006 r. two new localities of *Epipactis albensis* were found in village Pokrzywna in the Góry Opawskie Mountains (square CF42 of the ATPOL grid). Three specimens grow in a community from *Alno-Ulmion* alliance on the bank of the Zamecki Stream near a forest nursery (50°16'N 17°28'E; 350 m n.p.m.). The next 7 specimens are dispersed near the small reservoir on the Złoty Potok Stream in Pokrzywna (50°17'N 17°28'E; 360 m n.p.m.) in the community from *Carpinion betuli* alliance.
