

SUMMARY

Suski A., Suska K. Localities of *Galanthus nivalis* L. and *Leucoium vernum* L. in the Piekielna Dolina Valley in Polanica Zdrój (Kotlina Kłodzka, SW Poland).

Chrońmy Przyrodę Ojczyzną **64** (3): 82–86.

Galanthus nivalis was observed on three localities (S1, S2, S5; Fig. 1) in riparian zone of the Bystrzyca Dusznicka in early spring 2007. The

patches of an area from a few to about 60 ares were recorded where the species covered 15–100% of the surface. *Leucoium vernum* occurred at the same places and at two other moist and fertile localities (S3, S4; Fig. 1). The area of patches of *L. vernum* ranged between 1.5 and 10 ares and this species covered 3–95% of the surface.
