

SUMMARY

New localities of *Geastrum rufescens* Pers.: Pers. and *Trichaster melanocephalus* Czern. in the Western Pomerania (NW Poland)

Geastrum rufescens and *Trichaster melanocephalus* are very rare, threatened, and strictly protected species in Poland. These fungi have been found in the „Love Valley” Park near Zatoń Dolna (53°00'25” N, 14°16'30” E) in the years 2004–2006. They grow in beech forest (*G. rufescens*) and in thickets under *Aesculus hippocastanum*, *Fagus sylvatica*, *Robinia pseudoacacia*, *Crataegus* sp. and *Malus* sp. (*T. melanocephalus*).
