

SUMMARY

Jastrzębska B. The lichens of the nature reserve “Sterdyń” (the Nadbużański Landscape Park, E Poland).

Chrońmy Przyrodę Ojczyzn **63** (6): 55–64, 2007.

A total of 41 species was collected in 2006. The most numerous were corticolous lichens (31 species). The list of recorded lichens contains 7 protected species and 8 species included in the Polish Red List: *Chrysothrix candelaris* (CR), *Flavoparmelia caperata* (EN, protected), *Ramalina farinacea* (VU, protected), *Arthothelium ruanum* (NT), *Chaenotheca furfuracea* (NT), *Evernia prunastri* (NT, protected), *Graphis scripta* (NT) and *Pertusaria leioplaca* (NT). The most interesting of them (*C. candelaris*, *F. caperata*, *R. farinacea*, *C. furfuracea*) grow on oak bark.
