

SUMMARY

Kamiński K.Z. New site of *Geastrum coronatum* Pers. in central Poland.

Chrońmy Przyrodę Ojczyzną **63** (4): 56–59, 2007.

The occurrence of this rare, regarded as threatened, and protected earthstar species was recorded in Poddębice (51°53'40" N, 18°57'30" E; about 40 km NW of Łódź) in summer 2006. Some groups of 2–6 fruitbodies were found near *Robinia pseudoacacia* trees at eastern margin of a woody area in NE part of the town where limestone was excavated in 1930- and 1940ties, and then rubbish, soil etc. was dumped. On locality of *G. coronatum* occurred also *R. pseudoacacia*, *Pinus sylvestris*, *Acer pseudoplatanus*, *Populus tremula*, *Quercus robur*, *Betula alba*, *Cornus alba*, *Sambucus nigra*, *Chelidonium majus* and *Urtica dioica*.
