

## SUMMARY

### **Spalek K. A new locality of *Utricularia ochroleuca* R. W. Hartm. on the Opole Silesia (SW Poland).**

Chrońmy Przyrodę Ojczyzn **64** (4): 82–85, 2008.

*Utricularia ochroleuca* is considered endangered species in Poland and extinct in the Opole Silesia. In 2007 the new locality of *U. ochroleuca* was found near Kolonowskie (square CF08 of the ATPOL grid; 50°38'84" N, 18°24'38" E). Several dozen specimens grows in the abandoned canal (width 2–8 m, maximum depth about 1.5 m, sandy and muddy bottom, very slow flow of unpolluted, mesotrophic water). This is only 1 known site of *U. ochroleuca* within the Opole Silesia territory.
