

## SUMMARY

### **A new station of *Orchis purpurea* Huds. in the Lublin region**

*Orchis purpurea* occurs at a few stations in Roztocze, Pogórze Wielickie, the Małopolska and Lublin Upland. In the Lublin Upland was recorded at 4 stations: Kały near Zamość (GE 82), Czumów on the Bug River (GE 78), Biała Góra near Tomaszów Lubelski (GF 14) and Machnów (GF 25). In summer 2006 a new station was found in Wolica Uchańska near Grabowiec (GE 74). Four flowering specimens of *Orchis purpurea* grow here in xerothermic grassland developed on the slope of a calcareous hill. In this area other rare and endangered xerothermic species occur (*Rosa gallica*, *Cerasus fruticosa*, *Aster amellus*, *Campanula sibirica*), so the entire slope should be protected.
