

## SUMMARY

**Spalek K. New localities of *Potamogeton alpinus* Balb. in drainage ditches of fishponds in the Silesia (SW Poland).**

Chrońmy Przyrodę Ojczyzn **63** (5): 97–102, 2007.

Five new localities of *Potamogeton alpinus* were found during geobotanical investigations carried out in the years 1995–2006. These localities are situated in fishpond complexes near Ciasna (50°45'16" N, 18°36'28" E), Gwoździany (50°43'21" N, 18°31'49" E), Kościelna Wieś (51°25'28" N, 15°11'31" E), Rokitki (51°20'23" N, 15°53'41" E) and Ruda Sułowska (51°30'43" N, 17°06'41" E). At all these sites the populations of several hundred specimens were recorded in drainage ditches of fishponds at the depth 0.5–1.5 m on sandy or muddy bottom.
