

## SUMMARY

**Kowalczyk J.K., Kurzac T. Bumblebees and cuckoo bees (Hymenoptera, Apidae: *Bombus* Latr., *Psithyrus* Lep.) in the Wzniesienia Łódzkie Landscape Park.**

Chrońmy Przyrodę Ojczystą **64** (3): 43–56.

A state of knowledge about bumblebees and cuckoo bees in the Wzniesienia Łódzkie Landscape Park was summed up. It was based on the written data and own researches that were led in years 2004–2007. There were 15 species of bumblebees and 5 species of cuckoo bees (that is approximately 52% and 63% of all species known in Poland) which appearance in the park was confirmed. Among the bumblebees there were 4 species from *Red List of Threatened Animals in Poland* (Głowaciński 2002). These are: *Bombus jonellus*, *B. magnus*, *B. ruderatus* and *B. subterraneus*. The preliminary valorization of Bombini had been done.
