

SUMMARY

The outline of *Erysimum pieninicum* (Zapał.) Pawł. occurrence in the Pieniny Mts (Western Carpathians)

Erysimum pieninicum (Zapał.) Pawł. is an endemic plant of the Pieniny Mts. Until the year 1998 there was known only one stand spread from the hill of the Czorsztyń castle. New localities were discovered in the Wąwóz Homole nature reserve (the Małe Pieniny Mts) and on Flaki Mt. Number of specimens and the proportions between flowering plants and all plants in each cluster was shown in the first table. The second table presents the number of the specimens of *Erysimum pieninicum* (Zapał.) Pawł. in the each development stage on Flaki Mt. There are some phytosociological relevés put in this article which were made in each locality.
