

SUMMARY

Pawłowski B., Adamska E. A new locality of *Myriostoma coliforme* (Dicks.) Corda in Toruń with the most abundant occurrence of this species in Poland

Chrońmy Przyrodę Ojczystą **64** (2): 70–76.

Myriostoma coliforme is a very rare, threatened and strictly protected fungus species in Poland. It was known from only 3 localities in the country. New locality was found in Toruń on southern slope of the Vistula valley on a sandy, rich in organic debris substrate (53°01'05" N, 18°39'55" E). The occurrence of 98 basidiocarps was recorded.
