

## SUMMARY

### **Records of *Glis glis* (L., 1766) in the vicinity of Olsztyn and Złoty Potok in the Wyżyna Częstochowska Upland (S Poland)**

Edible dormouse was recorded in 9 localities within a study area between Olsztyn and Julianka in the north, Biskupice in the west, Bystrzanowice in the east, and Żarki and Kroczyce in the south in 2001–2006. The two main distribution areas are the “Sokole Góry” and “Parkowe” reserves and their environs.
